## Abstract

A short high-level overview of the paper, usually 150 words or so.

## References

- Daniel Jurafsky and James H. Martin. 2008. *Speech and Language Processing*. Prentice Hall, Upper Saddle River, NJ.
- Inderjeet Mani. 2001. *Automatic Summarization*. John Benjamins Publishing, Philadelphia, PA.

## 1 Introduction

Citation examples: According to Mani (2001), the goal of automatic summarization is to take an information source, extract content from it, and present the most important content to the user in a condensed form and in a manner sensitive to the user's or application's needs. With the vast amount of publically available text information on the internet, one of the most important uses of language processing is to help us query and extract meaning from these large repositories (Jurafsky and Martin, 2008).

## 2 System Overview

A description of the major design, methodological, and algorithmic decisions in your project. It often includes a schematic of the system architecture.

## 3 Approach

This section should provide the details of the major subcomponents of your system.

## 4 Results

This section should present the major results of the formal evaluation of your system and components.

## 5 Discussion

This section will analyze your results in a bit more detail. It is an appropriate location for error analysis and assessment of the strengths and weaknesses of the different components.

## 6 Conclusion
